

AYHM MOHAMMED OBEIDAT

Amman, Jordan | +962 788234055 | ayhmobeidat.cs@gmail.com | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Computer Science graduate from Jordan University of Science and Technology (JUST) with a strong foundation in C# and .NET development and practical experience gained through academic and personal projects. Familiar with ASP.NET Core Web APIs, Entity Framework Core, SQL Server, REST APIs, JWT authentication, Dependency Injection, layered architecture, and automated testing. Developed a multi-layered driving license management system as a practical project using Domain, Application, Infrastructure, API, and Presentation layers. Seeking an entry-level .NET Backend Developer or Junior Software Engineer position.

EDUCATION

Jordan University of Science and Technology (JUST) — Irbid, Jordan

Bachelor's Degree in Computer Science | 2026

TECHNICAL SKILLS

Languages: C#, SQL

Backend & .NET: ASP.NET Core Web API, .NET, Entity Framework Core, LINQ, REST APIs

Architecture & Design: Layered Architecture, SOLID Principles, Dependency Injection, Repository Pattern, Unit of Work, Service Layer, DTOs, Result Pattern, Separation of Concerns

Security & API: JWT Authentication, Role-Based Authorization, Rate Limiting, Global Exception Handling, Problem Details, Swagger/OpenAPI

Database: SQL Server, SQL Queries, JOINS, GROUP BY, Subqueries, Database Design, Entity Relationships

Testing: xUnit, Unit Testing, Integration Testing, Moq

Desktop: WPF, MVVM

Tools: Git, GitHub, Visual Studio, VS Code, SQL Server Management Studio (SSMS), Azure DevOps

PROJECTS

DVLD — Driving & Vehicle License Department System

C# | .NET | ASP.NET Core Web API | EF Core | SQL Server | WPF | JWT | xUnit

- Developed a multi-layered driving license management system using C# and .NET with separate **Domain, Application, Infrastructure, API, and Presentation** layers.
- Built an **ASP.NET Core Web API** to expose application functionality through RESTful endpoints while separating API, business logic, and data-access responsibilities.
- Applied **Dependency Injection, Repository, Service Layer, and Unit of Work** patterns to improve separation of concerns and maintain transactional consistency.
- Used **Entity Framework Core and SQL Server** for persistence, entity relationships, CRUD operations, and LINQ-based queries.
- Implemented **JWT authentication and role-based authorization** for protected API endpoints.
- Added centralized API error handling using **global exception handling, Result Pattern, and Problem Details** responses.
- Added **login rate limiting** to limit repeated authentication attempts and return HTTP 429 when the configured limit is exceeded.
- Developed **unit and integration tests** covering application logic, API behavior, infrastructure operations, authentication, and security-related scenarios.
- Implemented core business workflows including driving license applications, test appointments, license issuance, renewal, replacement, detention and release, and international licenses.
- Used **Git/GitHub** for version control and maintained an **Azure DevOps pipeline** for automated restore and build operations.
